

Sample Input and Output

For the Face_Recognition_Attendance

While running first program (i.e 1_capture_faces.py) first output you will get is this

```
Enter the person's name (use underscores instead of spaces, e.g. Rahul_Sharma): Arjun
```

Enter your name (without space)

Press “enter” key

Webcam will open after that the below output will come

```
Look straight at the camera. Slowly turn your head slightly left/right/up/down for variety.  
Capturing 40 images for 'Arjun'. Press 'q' to stop early.
```

```
Done. Saved 40 images to 'dataset/Arjun'.  
Repeat this script for every other person, then run 2_train_model.py
```

Run the second program (i.e 2_train_model.py) you will get this output

```
Training model on dataset...
```

```
Arjun: 40 images processed
```

```
Sriram: 40 images processed
```

```
abcd: 40 images processed
```

```
akarsh: 40 images processed
```

```
dhruvin: 40 images processed
```

```
Training complete: 200 images across 5 people.
```

```
Model saved to 'trainer/trainer.yml'
```

```
You can now run 3_mark_attendance.py
```

I have given 5 students input you can give more/less also

Run the third program (i.e 3_mark_attendance.py) you will get this output

```
Choose a mode:  
  1 – Live webcam attendance  
  2 – Recognize from an uploaded image  
Enter 1(To open webcam) or 2(To upload image): 1
```

Mostly recommended is to go with “1” because opens webcam

Once you give input “1” and press “enter” key webcam will open

Press “q” key in laptop once you see green colour face in your webcam to close webcam

```
^[Live attendance started. Press 'q' to quit.
```

```
Attendance marked: Arjun at 00:06:07
```

You will see the output like the above image

Run the fourth program (i.e forthviewattendance.py) you will get this output

```
Attendance for 2026-08-02
-----
Arjun                00:06:07
```

If you open csv file which will named as Attendance.csv the you can some like this output

Arjun	2026-08-02	00:06:07
